Annex list

A

- 1) Number of cells, battery types, weights, energy limits, runtime.
- 2) Maximum and minimum Voltage
- 3) Naviga approved energy limiters and connection chart

B Safety requirements

Allowed Kill switch examples

C Race coarse

- 1) Naviga triangle for miniEco , Eco expert, Eco Team
- 2) Triangle for F1E / F1V
- 3) Triangle for F3E and F3V
- 4) Oval for Mono / Hydro
- 5) M - coarse for FSRE

D Competition documents

- 1A) Start card for F1V
- 1B) Start card for F1E
- 2) Start card for F3
- 3) Lap counting sheet
- 4) List of errors in F3
- 5) Calculation database for F3
- 6) How to set up noise level measurement
- 7) Record document
- 8) Engine capacity measurement
- 9) Voltage and battery check F1E
- 10) List of noise level measurements
- 11) weight and Voltage control sheet ECO, FSRE ,MONO and Hydro

E Miscelaneous

- 1) Example of permanent registration number
- 2) Example of race number
- 3) Transponder assembly
- 4) Example how to set up Naviga triangle

Note: The 30mm cable is to prevent battery terminal beaks, it must be directly on battery!

Annex A 2

Maximum and Minimum battery Voltage

Cell type	Max. Voltage before race	Min. Voltage after race
NiMh	1.42V	none
Lipo	4.23V	3.30V
LiFePo	3.65V	2.50V

The measurement is performed only once. The measurement cannot be influenced by any tools, such as resistors or chargers.

Annex A 3

Naviga approved types of energy limiters

At competitions held according to Naviga Rules, the following approved limiter types can be used:

MDLE4 version 1.1 or later,

mlm eLim - All versions,

KLW - All versions

TSS - All versions,

Tenshock TS-L01 - v2.0 or later for 21Wh,

Tenshock TS-L02 - v2.0 or later for 60Wh,

Tenshock TS-L03 - v2.0 or later for 42Wh,

Tenshock TS-L04 - v2.0 or later for 180Wh,

Tenshock TS-L05 - v2.0 or later for 120Wh,

Limiters made for mini classes (eLim mini, KLW mini TS-L01, TS-L03) may only be used in mini categories!

Tenshock (non switchable) models may only be used in categories of their own energy classes!

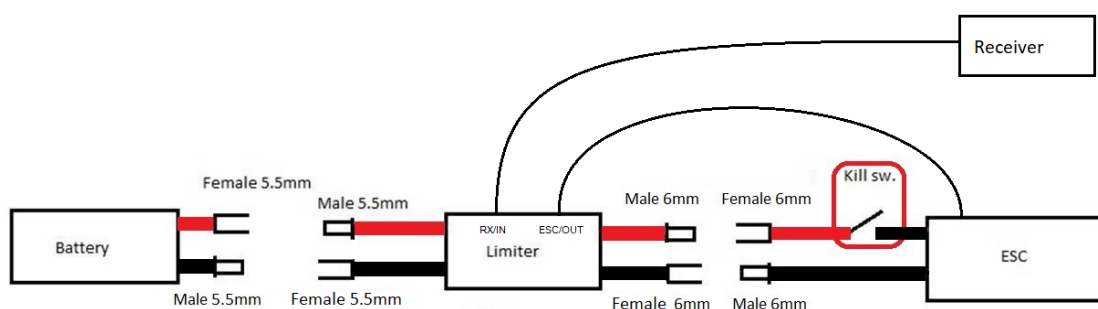

Connecting of limiters

Base principle of the connection scheme of limiters in all energy classes is to not to connect the limiter in the power circuit in reverse in any way, neither from polarity, nor from input/output point of view.

The correct connection therefore must be maintained by use of different connectors on power wire ends. Moreover, the voltage measuring line is to be directly soldered to the other power line running from battery to ESC respectively. Use of balancer connector port for measuring the voltage is not allowed.

60, 120, 180Wh categories:

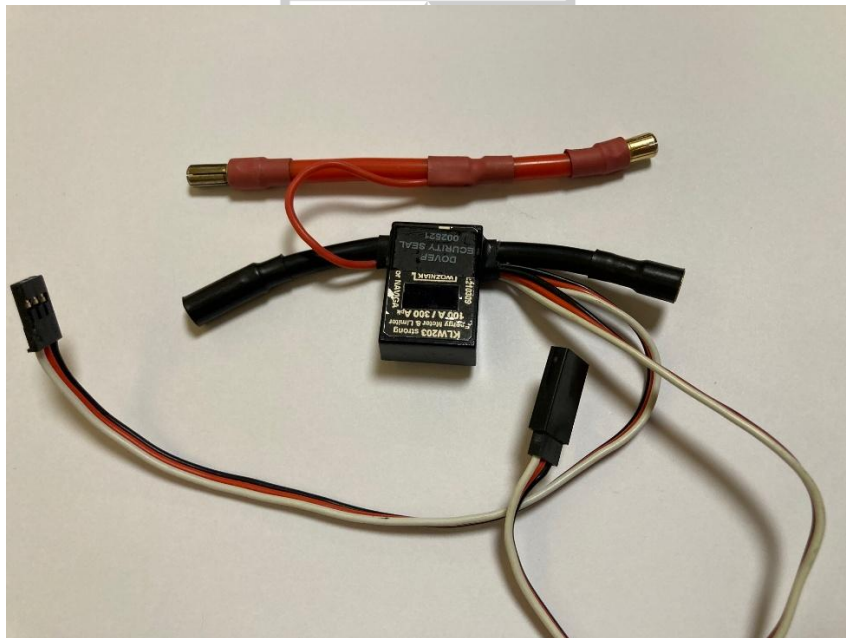

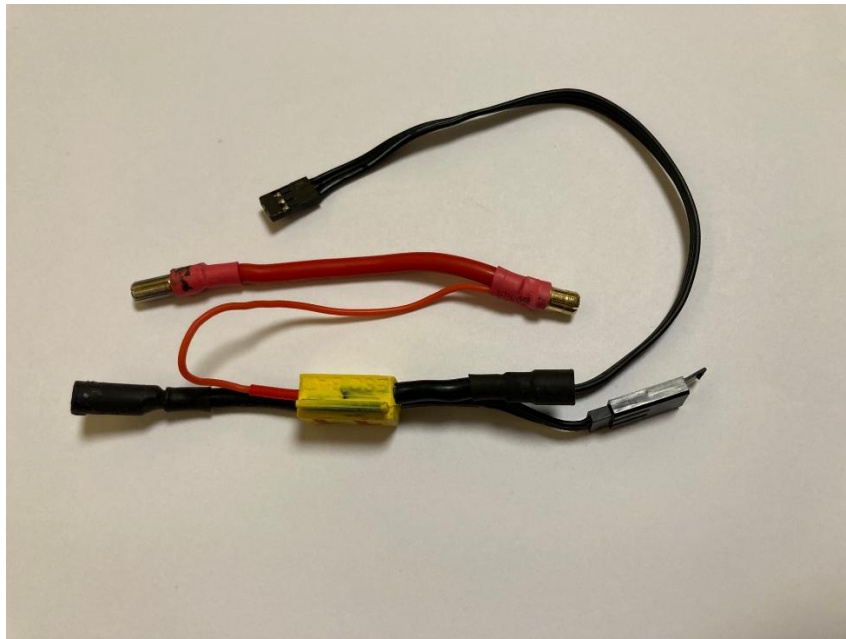

Common connection scheme is according the following drawing.

Connection diagram for limiters in 60, 120, 180 Wh classes

Hollow depth of female 5.5 mm connector should be 11 mm minimum.

Hollow depth of female 6 mm connector should be 7.8 mm minimum.

60Wh, 120Wh, 180Wh energy classes connectors fitted according to the rules

21, 42Wh categories:

Any type of connectors may be used in the boat at the competitor's choice, that meets the above requirements, but adaptors must be provided by the racer for testing any time during the event.

The adaptor must make the following connections:

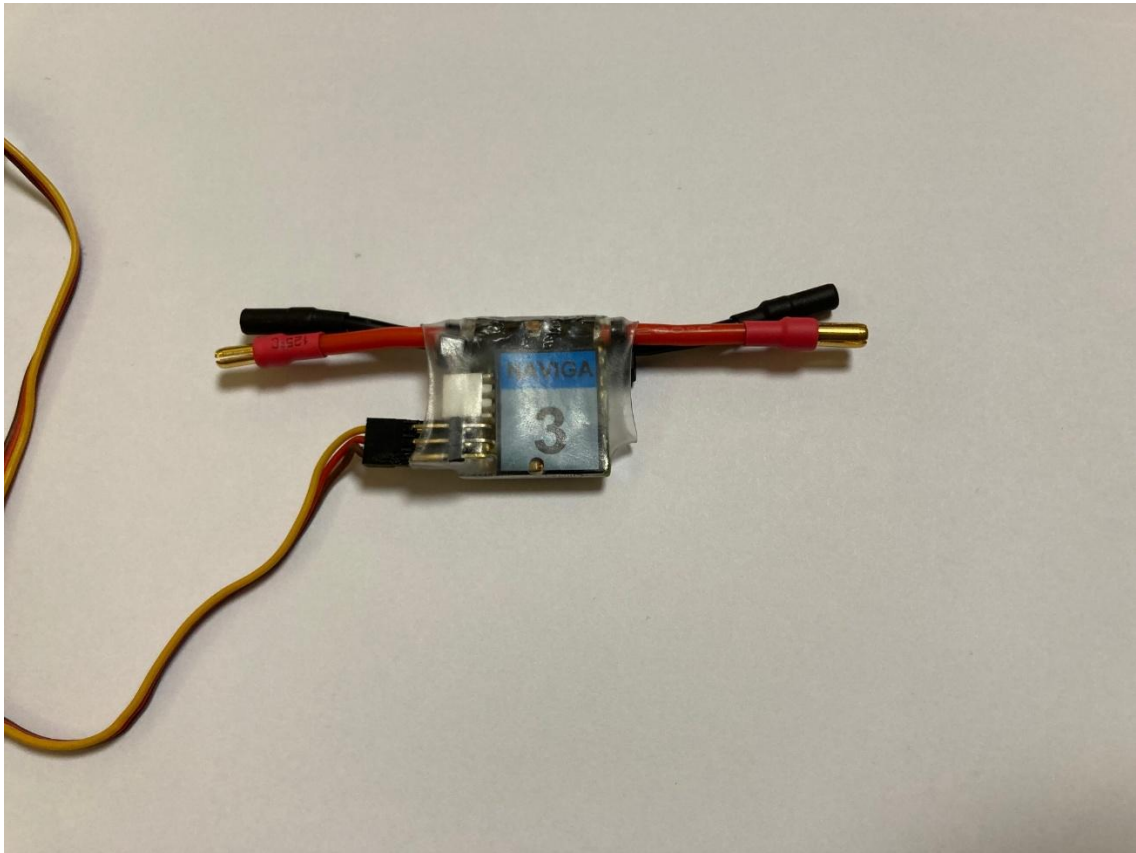

3.5mm Bullet male going to Battery +, 4mm Bullet male going to ESC positive (kill switch),

3.5mm female bullet connector on battery negative and 4mm bullet female going to ESC negative side.

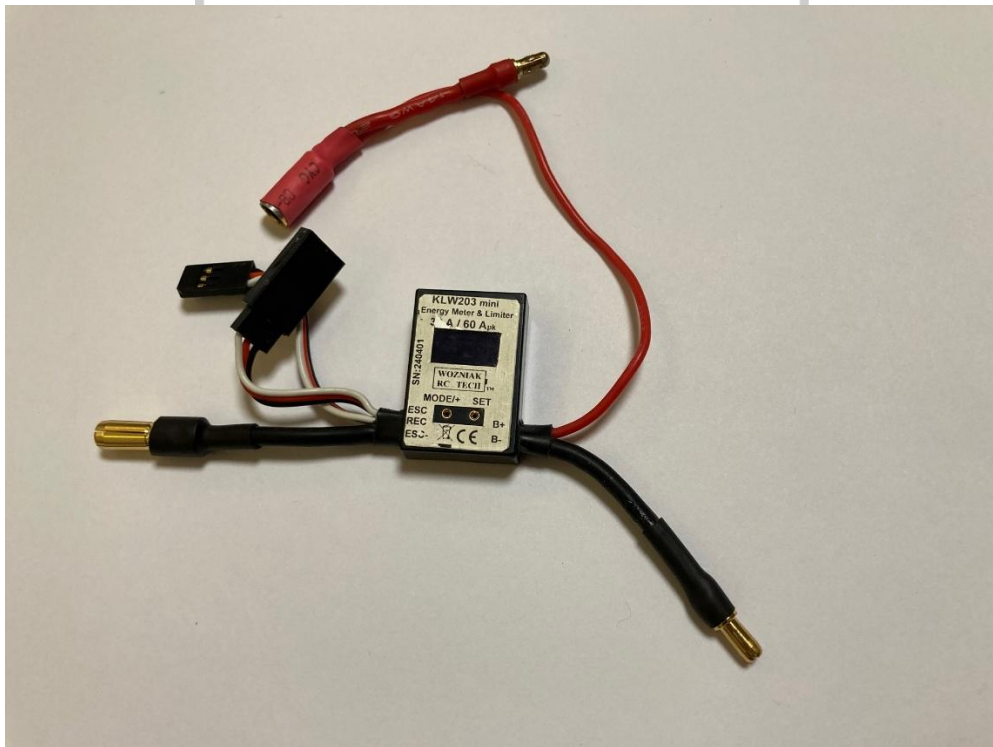

When other connector arrangement is used than the above, the custom connectors must meet the following requirements.

- the limiter cannot be inserted into the power lines the wrong way neither current, nor voltage wise. This means, it must have different connectors on the current measuring (thick) line ends. (In case of MDLE and eLim it is the positive wire, in all other cases it is the negative wire.

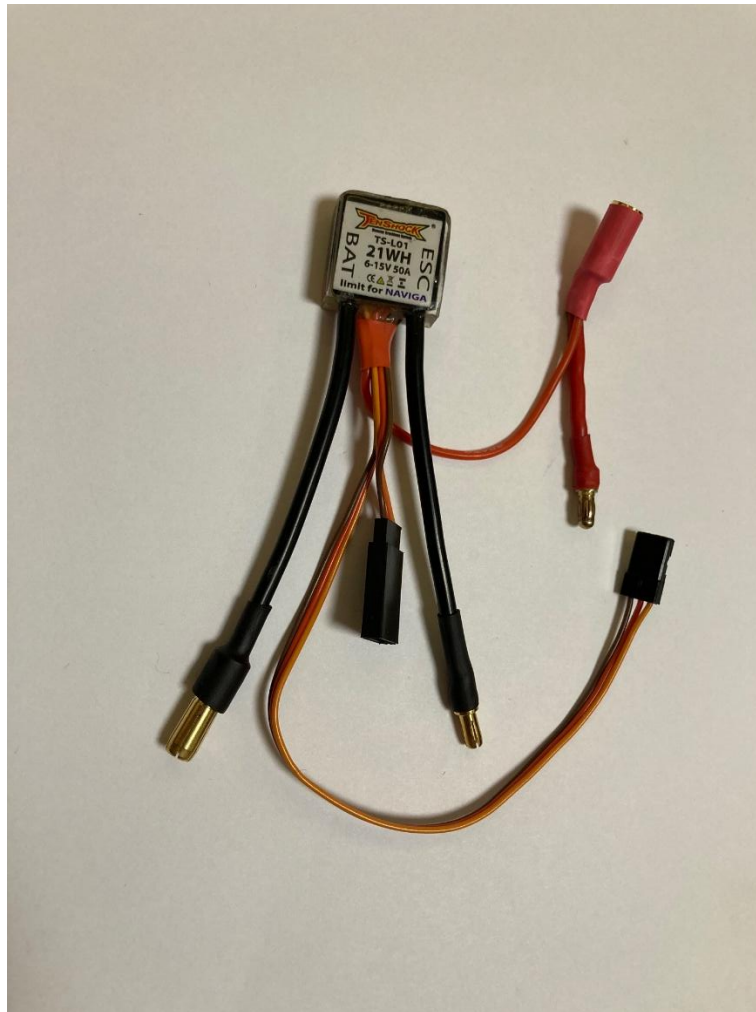

- the line through the voltage is measured (thin wire, if any) is directly soldered to the line running to the ESC from battery. (The line other than the one on the current measurement is made.)

eLim mini, connectors according Naviga suggestion. - No adapter needed.

KLW Mini, custom connectors. – Adapter needed

Tenshock 21Wh custom connectors – Adapter must be provided.

Suggested and correct sequence for connecting the limiter:

1. - ESC side black and red, wires
2. - Servo signal in/output connectors
3. - battery wires.

The above order of making connections ensures in all cases the safe and fail free installation of the limiter.

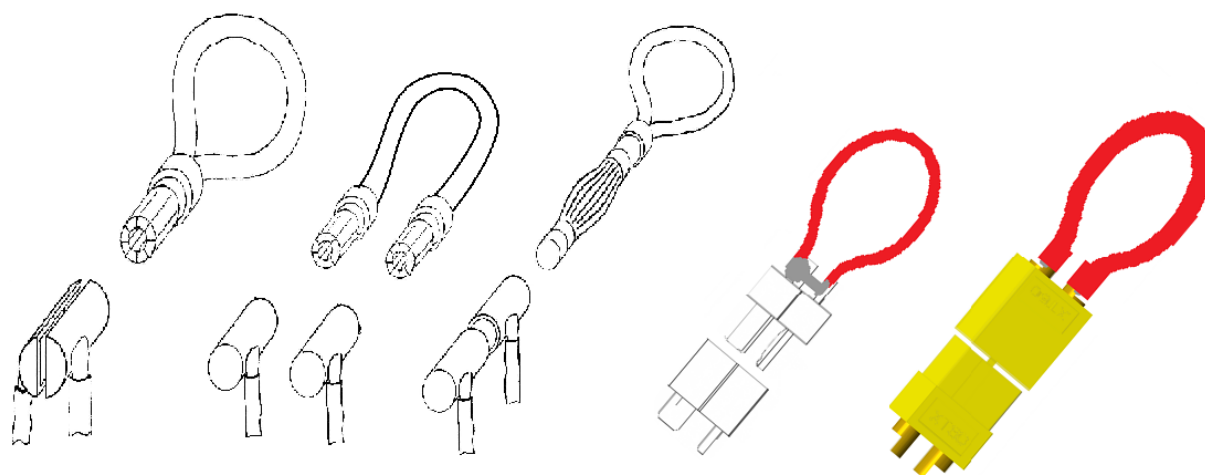

Annex B

The Safety Kill Switch

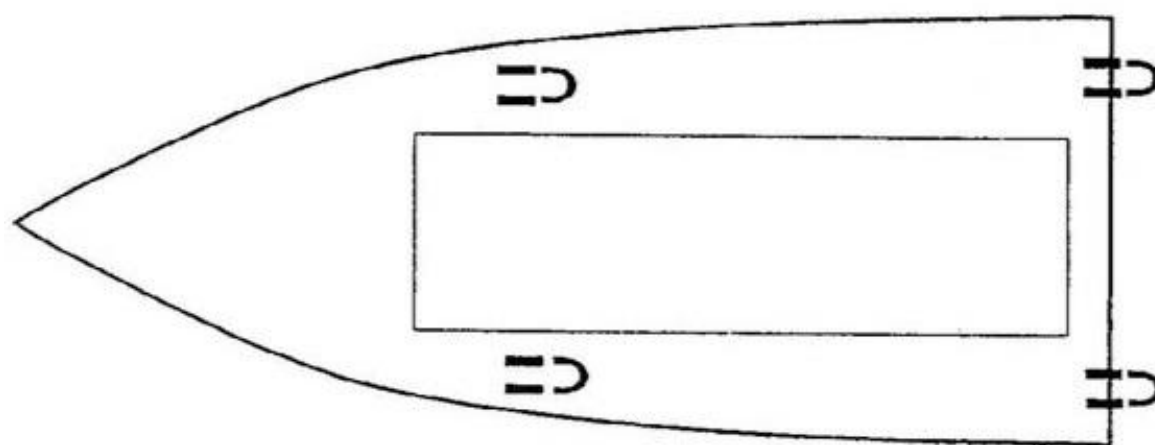

The kill switch can be mounted on either side of the model (see drawing). The kill switch must be made out of 2 solid mounted connectors (in or at the boat's deck) and 1 or 2 plugs connected by a flexible red wire. The flexible wire must form a loop with a minimal diameter of 20 mm. The connectors can be mounted either next or behind one another. Factory made standard battery connector (like T-Deans or XT) can also be used as kill switch as long as a red flexible wire loop with a minimal diameter of 20mm is attached to it. (see diagram)

In all cases the loop must withstand the pull force needed for disconnection and must be thick enough to not cut or hurt while pulled by finger.

The kill switch must directly interrupt the circuit between the motor drive electronics and battery or in case of energy limiter used, between limiter output and motor driving circuitry. Removal of the switch must be against the direction of travel.
