

Dear President Walter and Secretary-General Daniel,

With the support of leaders including President Walter and Secretary-General Daniel, I have mainly accomplished the following work this year:

I. Launched an innovative competition format for FSR in top-tier events here in China ,called China National Games ,laying important practical testing groundwork for the global popularization of the FSR-E project.

1. The rule is Three athletes from each participating team operated three types of model boats (FSR-V27, FSR-O27, and FSR-OE21) respectively, and the rankings were determined comprehensively based on the number of laps completed and the time spent.

2. The FSR-OE21 model was a major highlight of this year's event. This project focuses on hull design, electric performance, and endurance; it not only tests the design and manufacturing capabilities of motors but also serves as a comprehensive assessment of the stability of power systems, embodying the concepts of environmental protection, efficiency, and advanced technological sports.

II. Through the competitions, it was found that the FSR-OE21 can solve the problem of high entry barriers for young athletes in FSR projects

Young athletes have significantly improved their skills through FSR-OE21 training, enabling them to smoothly transition to the FSR-V project afterward.

III. Agreed to allocate FSR reserve funds to support the FSR European Championship (to be held in the Netherlands in April) to promote the development of the project

IV. Completed the certificate renewal process for multiple referees, ensuring the smooth implementation of FSR sports activities worldwide .

thank you !

Yang Zaijun
